name

Per capita GDP

Submit SQL

Give the name and the per capita GDP for those countries with a population of at least 200 million. HELP:How to calculate per capita GDP per capita GDP is the GDP divided by the population GDP/population SELECT name, gdp/population FROM world WHERE population >= 200000000

\*sfwQ3

• • • • sqlzoo\_net/wiki/SELECT\_from\_WORLD\_Tutorial#Per\_capita\_GDP

Per capita GDP

Give the name and the per capita GDP for those countries with a population of at least 200 million. HELP: How to calculate per capita GDP SELECT name, gdp/1000000000000 FROM world WHERE population>200000000 Submit SQL Restore default

South America In millions

Divide the population by 1000000 to get population in millions.

Show the name and population for France, Germany, Italy

SELECT name, population/1000000 FROM world WHERE continent = 'South America'

Restore default

Restore default

Restore default

Two ways to be big: A country is big if it has an area of more than 3 million sq km or it has a population of

Show the countries that are big by area or big by population. Show name, population and area.

SELECT name, population, area FROM world WHERE area > 3000000 OR population > 250000000

Restore default

Exclusive OR (XOR). Show the countries that are big by area (more than 3 million) or big by

population (more than 250 million) but not both. Show name, population and area.

• United Kingdom has a small population and a small area, it should be **excluded**.

SELECT name, population, area FROM world WHERE area > 3000000 XOR population > 250000000

Restore default

Divide by 1000000 (6 zeros) for millions. Divide by 100000000 (9 zeros) for billions.

Restore default

(10000000000); that is 12 zeros). Round this value to the nearest 1000.

Show per-capita GDP for the trillion dollar countries to the nearest \$1000.

Restore default

SELECT name, ROUND(gdp/population, -3) FROM world WHERE gdp >= 100000000000

SELECT name, ROUND(population/1000000, 2), ROUND(gdp/100000000, 2) FROM world WHERE continent = 'South

• Australia has a big area but a small population, it should be **included**.

• Indonesia has a big population but a small area, it should be included.

• China has a big population and big area, it should be excluded.

France, Germany, Italy

Submit SQL

SELECT name, population FROM world WHERE name IN ('France', 'Germany', 'Italy')

Submit SQL

United

Show the countries which have a name that includes the word 'United'

Submit SQL

SELECT name FROM world WHERE name LIKE '%United%'

Two ways to be big

Submit SQL

more than 250 million.

One or the other (but not both)

Submit SQL

Show the name and population in millions and the GDP in billions for the countries of the continent 'South America'. Use the ROUND function to show the values to two decimal places. For South America show population in millions and GDP in billions both to 2 decimal places. Millions and billions

America'

Rounding

Submit SQL Click here to play the SELECT card game ₽

Trillion dollar economies Show the name and per-capita GDP for those countries with a GDP of at least one trillion

Submit SQL

11. Greece has capital Athens.

 You can use the LENGTH function to find the number of characters in a string SELECT name, LENGTH(name), continent, LENGTH(continent), capital, LENGTH(capital) FROM world WHERE name LIKE 'G%'

12.

SELECT name, LEFT(name,1), capital

FROM world

All the vowels

SELECT name FROM world WHERE name LIKE 'B%'

BBC QUIZ
